

Animal Vocalisation Internship

Job Opening: Animal Vocalisation Intern (100%)

Location: Zurich | Start: July

About Synature: Synature is a startup building state-of-the-art systems for animal sound monitoring. Our product consists of fully autonomous smart microphones that stream audio from the field, various AI models that decode animal vocalizations and a web application that visualizes the results. The goal is to make nature more measurable. We have active projects on four different continents.

Your Role: You will dive into the world of bioacoustics, exploring how different species use sound to communicate with the world around them. Working closely with our team, you will research vocalisations across a range of species and connect with universities and bioacoustic practitioners around the world. The role may also include occasional fieldwork, where you maintain microphones across different locations in Switzerland.

If you have a passion for nature and want to work at the frontier of animal communication, this is your opportunity.

Duration: 2-3 months

Your Profile:

- Ongoing B.Sc. or M.Sc. in Biology or a related field
- Experience with ornithology, bioacoustics, or species recognition is a plus
- Fluent in English (German is a plus)
- Passionate about wildlife and eager to work in a fast-moving startup environment

Your Team: You will be working mostly with the Head of Nature, Ian Mehli. You will also have regular interaction with Olivier Stähli, CEO, Noah Schmid, CTO as well as Gabriel Prélaz, Head of AI.

Our Offer:

- Full-time paid internship
- Work with a small but mighty team
- Help build technology that will shape how we monitor and understand ecosystems
